## How to obtain a MADYMO license

In order to run a MADYMO product, you need to obtain a license file from your local TASS representative by following these steps:

1. Download the licensing utility 'lmutil' for your computer platform from the Flexera website (<http://learn.flexerasoftware.com/content/ELO-LMGRD>). You'll need to complete the registration on the Flexera website for this first
2. Once you have download and installed 'lmutil' on your computer, run the command 'lmutil lmhostid' to obtain the Host ID
3. Run the command 'lmutil lmhostid -hostname' to obtain the Host Name of your computer
4. Send the resulting Host ID and Host Name information to your local TASS representative. They will create a MADYMO license file for you
